Cybersecurity in construction?

Problem Statement

2022

A study by NordLocker (2023) showed that the construction industry had been the primary target of ransomware attacks in 2022.

RANK	INDUSTRY	NUMBER OF CASES
1	Construction	142
2	Finance	123
3	Manufacturing	121
4	Tech	116
5	Business services	99
6	Transportation	91
7	Public sector	78
8	Consumer services	77

Problem Statement

A Survey on Cybercrime and Cybersecurity in the MENA Construction Industry

in collaboration with Accuracy and Freshfields

How do you think is your organisation's investment in cybersecurity?

(García de Soto et al., 2024)

Hack My Robot (HMR)

Hack My Robot (HMR)

- **The first** academic-driven cybersecurity competition in the construction context;
- Organized since 2022 as part of CSAW (Cybersecurity Games & Conference), the largest student-led cybersecurity event in the world.

Target: Compromising the collected data and the functionality of a construction robotic system.

Qualification Round

Open-ended questions:

- How would you compromise?
- What are the most vulnerable components?
- How to improve?
- What would be your motivation?

Final Round

Demonstrations and poster presentations:

Solution Overview

Crowdsourcing

Gathering ideas or services by leveraging the contributions of a large group of people.

Case study:

Hack My Robot

Collect ideas from students related to the cybersecurity issues and mitigation strategies related to the given robotic system in construction.

Topic Modeling

A statistical method to identify the common words or word groups in a body of text and cluster them under various topics.

Case study:

Hack My Robot

Identify the most emphasized cybersecurity issues and mitigation strategies based on the collected data.

Solution Overview

STEP 1: DATA COLLECTION AND PREPARATION

Solution Overview

STEP 1: DATA COLLECTION AND PREPAR

Answers to open-ended questions (text)

Poster presentations (audio)
speech-to-text

Poster content (text)

Question 1 - Considering the robotic system in the provided challenge document [link], what would you do to compromise the data collected? *
Be as detailed as possible. Try to go beyond the traditional cyberattacks and find creative ways to compromise the system.

Your answer

Question 2 - Considering the robotic system in the provided challenge document [link], what would you do to compromise the operation? *
Be as detailed as possible. Try to go beyond the traditional cyberattacks and find creative ways to compromise the system.

Your answer

Question 3 - In your opinion, what are the most vulnerable components? why? *
Be as detailed and creative as possible.

Your answer

Solution Overview

STEP 3: TOPIC LABELING AND LABELING

prompt = ""I have a topic that contains the following documents: **{representative documents}**
The topic is described by the following keywords: **{keywords}**
Can you summarize this topic with a label and a short paragraph?""

Labels generated for the identified topics:

- **Topic 0:** Security Vulnerabilities in Robot Operating Systems (ROS)
- **Topic 1:** Wireless Network Hacking Techniques
- **Topic 2:** Network Security and Vulnerability to DoS Attacks
- **Topic 3:** Security Vulnerabilities in ROS Network Communication
- **Topic 4:** Impact of Compromising Autonomous Excavators in Construction
- **Topic 5:** LiDAR Sensor Security and Data Integrity
- **Topic 6:** Enhancing Security in Firmware and Software Updates
- **Topic 7:** Network Security: Intrusion Detection and Prevention Systems
- **Topic 8:** Sabotage and Espionage in the Construction Industry
- **Topic 9:** Malware Hidden in Images through Steganography

Solution Overview

Topic 7: Network Security: Intrusion Detection and Prevention Systems

Summaries for the identified topics:

Summary: This topic focuses on the critical role of intrusion detection systems (IDS) and intrusion prevention systems (IPS) in network security. These systems are essential for monitoring network traffic to identify and respond to suspicious activities, including potential Denial-of-Service (DoS) attacks. The documents emphasize the deployment of both IDS and IPS to enhance security measures, alongside the use of application-layer firewalls that inspect traffic at the application level. The overall goal is to safeguard networks from unauthorized access and threats by continuously monitoring and managing network traffic.

Solution Overview

Green cluster: Security vulnerabilities in wireless communications and MitM attacks

Red cluster: Cyberattacks against robot sensors on construction sites and potential physical damages

Yellow cluster: DoS attacks targeting robotic systems

Purple cluster: Password cracking to access sensitive files

Blue cluster: Security vulnerabilities in ROS network communications

VOSviewer

STEP 4

Visualization of term co-occurrences

Solution Overview

- **Topic 0:** Security Vulnerabilities in Robot Operating Systems
- **Topic 3:** Security Vulnerabilities in ROS Network Communication
- **Topic 7:** Network Security: Intrusion Detection and Prevention Systems
- **Topic 1:** Wireless Network Hacking Techniques
- **Topic 6:** Enhancing Security in Firmware and Software Updates

- **Topic 4:** Impact of Compromising Autonomous Excavators in Construction
- **Topic 5:** LiDAR Sensor Security and Data Integrity
- **Topic 8:** Sabotage and Espionage in the Construction Industry
- **Topic 9:** Malware Hidden in Images through Steganography

- **Topic 2:** Network Security and Vulnerability to DoS Attacks

Topic 6: Enhancing Security in Firmware and Software Updates

This topic emphasizes the importance of maintaining robust security measures during firmware and software updates, particularly for devices like the Raspberry Pi. Regular updates are crucial for patching vulnerabilities, and using secure protocols during these updates is essential to prevent attacks such as Man-in-the-Middle (MitM), which can compromise the integrity of the firmware. The Raspberry Pi Foundation recommends using the `rpi-update` tool for fetching and applying firmware updates securely from the official repository. Strengthening the update process through robust encryption and regular application of security patches is advised to protect against potential threats.

Use the 'rpi-update' tool for firmware updates of Raspberry Pi.

Limitations

Limitations

- The data from Hack My Robot to perform topic modeling was limited since it started in 2022.
- The hyperparameters for different components of BERTopic can be fine-tuned more rigorously.
- BERTopic is not compared with other topic modeling methods, such as LDA.

Conclusions and Future Work

Conclusions and Future Work

- Cybersecurity knowledge exists but not efficiently used in the AECO sector.
- The proposed approach takes the unstructured cybersecurity knowledge and provides useful insights for decision-makers in the sector.
- Different ways of crowdsourcing knowledge will be investigated through collaborations with construction companies.
